

Navratri Event & Garba Store — Project Proposal

Prepared for: Client

Project: Navratri Event Ticketing + Garba E-commerce & Rental Platform

Purpose (Executive Summary)

This proposal describes the scope and feature set for a web platform that combines an event ticketing system with a Garba-focused e-commerce store and a separate rental system for lehengas / chaniya cholis. The goal is to enable customers to buy Garba items, rent traditional outfits, and book event tickets (with QR codes), while providing a simple admin interface with three roles for event operations and gate validation.

Scope & Key Rules (Client Requirements)

- **Three admin roles only:**
 1. **Super Admin** — Full access to all features.
 2. **Event Management** — Manage events, tickets, and gate keeper assignments.
 3. **Gate Keeper** — Only QR scanning / validation and scan logs.
 - **Separate flows for Buy vs Rent:** Buyable products (one purchasing pipeline) and Rental products (entirely separate rental pipeline: availability, deposits, rental dates, returns) — they must not be mixed.
 - **Payment methods:** Support both **COD** and **Online payments** (e.g., Razorpay). COD orders/tickets are recorded and settled manually by admin.
-

Deliverables

- Production-ready **User Web App** (ReactJS)
 - **Admin Web App** (ReactJS) with role based access limited to the three roles above
 - **Backend API** (Node.js + Express) and **MongoDB** schema
 - Payment integration (Online payment gateway + COD handling)
 - Ticketing with **unique QR codes** and server-side validation
 - Email / SMS notifications (booking, order confirmation, rental reminders)
 - Documentation: API list, DB schema, deployment instructions
-

User Web App — Features (Detail)

1. Public / Marketing

- Event banner and promos for Navratri
- Search & navigation for Buy and Rent catalogs
- Featured products and seasonal offers

2. Buy Catalog (E-commerce)

- Product listing (category, price, stock)
- Product details (images, description, sizes if applicable)
- Add to cart / Edit quantity
- Checkout flow for **Buy orders**
 - Shipping address selection

- Payment method: **COD** or **Online**
 - Order summary, taxes, shipping
 - Order confirmation, email/SMS invoice
- Order history (Buy Orders)

3. Rental Catalog (Separate Flow)

- Rental listing only (Lehenga / Chaniya Choli etc.)
- Product details include: rentPerDay, depositAmount, availableStock, size options, washing/return terms
- Rental booking flow (separate from buy checkout):
 - Select rental start & end dates
 - Check availability for requested dates
 - Calculate rental amount + deposit + any refundable balance
 - Payment method: **COD** or **Online**
 - Rental contract / T&C checkbox
- Active rentals list (with pickup & return dates)
- Rental return instructions and late-fee information
- Notifications: upcoming return reminder, late return alerts

4. Ticket Booking

- Event page (venue, date/time, rules)
- Ticket Prices and Dates
- Select quantity & buyer details

- Checkout / Payment (Only Online Payment)
- On successful booking: Generate unique ticket record + **QR code** (stored on server & embedded in downloadable PDF / email)
- Tickets in user profile (download, share, show QR at entry)

5. Profile & Account

- Register / Login (email / phone OTP optional)
- Manage addresses
- View combined transaction history with tabs: Buy Orders, Rent Orders, Tickets
- Notifications settings

6. Misc

- Search & filters across Buy and Rent (clearly separated filters)
-

Admin Web App — Features (Detail) (Roles: Super Admin, Event Management, Gate Keeper)

NOTE: Role permissions in later section.

Global Admin Sections

- Login & role aware dashboard

- Navigation to: Products (Buy), Rentals, Orders, Rentals Management, Events & Tickets, Users, Reports, Gate Keepers, Settings

Dashboard (role aware)

- Sales summary (split by Buy, Rent, Tickets)
- Active rentals / due returns
- Tickets sold vs capacity (per event)
- Recent orders & ticket scans
- Low stock alerts (buy items and rental inventories)

Product Management (Buy Items) — Super Admin

- Create / Update / Delete buyable products
- Manage stock, SKU, price, images, descriptions
- Category & tag management

Rental Management — Super Admin

- CRUD rental items (rentPerDay, deposit, availableStock, sizes)
- View issued rentals — status: Issued / Returned / Late
- Manually mark returns and calculate fines
- Set rental rules (late fee per day, damage fee guidelines)

Orders (Buy & Rent)

- List & filter orders by status / date / payment method

- View order details including payment receipts
- Mark COD orders as collected / paid
- Initiate refunds or cancellations when necessary

Events & Ticket Management — Event Management role (also accessible to Super Admin)

- Create & manage events (name, date, venue, description)
- Configure multiple ticketTypes (name, price, capacity, per-person limit)
- View attendee list & export CSV
- Issue refunds and manage cancellations

Gate Keeper Management — Event Management role

- Create / assign Gate Keeper accounts to events or entry gates
- Configure gate settings (which ticket types are allowed at which gates)
- View scan logs and export

QR Code Validation — Gate Keeper

- Minimal UI: input or camera QR scan
- On scan: server validation returns one of: **Valid (first use)**, **Already Used**, **Invalid**
- Gate Keeper can mark manual override (e.g., guest allowed after manual check) — requires proper audit log

Users Management — Super Admin

- View user profiles, order & rental history
- Block / unblock users
- Manage support tickets or disputes

Reports & Logs — Super Admin / Event Management

- Sales reports (filterable by date, product type, event)
- Rental returns pending / late list
- Ticket scan logs with gate & gate keeper id
- Payment reconciliation (COD vs Online)

Settings & Integrations — Super Admin

- Payment gateway settings (Razorpay credentials)
 - Email (SMTP) and SMS provider settings
 - Tax, fees, and global policies
 - Terms & rental policies
-

Roles & Permissions (Concise)

Super Admin (Full Access)

- All features across products, rentals, events, tickets, users, settings, and reports.
- Can create Event Management and Gate Keeper accounts.

Event Management

- Create/manage events & ticket types
- Manage gate keepers & scan logs
- View ticket sales & attendee exports
- Access to ticket refund/cancellation features
- Cannot delete system settings or remove Super Admins

Gate Keeper

- Only access: QR scan page + scan logs (view) related to assigned events/gates
 - No access to product/rental CRUD, payment, or sensitive user data beyond what is required for validation
-

Technical Notes (High Level)

- **Frontend:** ReactJS (two apps for user & admin); responsive design; QR scanner support on mobile browsers (camera access) for Gate Keepers
- **Backend:** Node.js + Express, JWT-based auth, role based middleware
- **DB:** MongoDB (collections: users, buyProducts, rentProducts, buyOrders, rentOrders, events, tickets, qrScanLogs)
- **Payment:** Razorpay (recommended) + COD handling logic. All online payments must be verified server-side before confirming orders/tickets.
- **Notifications:** Email + SMS for confirmations and rental reminders
- **Security:** HTTPS required in production, strong password hashing, role checks, rate limiting on scan API to prevent brute force

How the System Works (Flow)

1. **Buying Items:** User visits website → Clicks **Buy Garba Items** → Selects products → Adds to cart → Chooses COD or Online payment → Order confirmation sent via email/SMS.
2. **Renting Outfits:** User clicks **Rent Outfits** → Selects outfit → Chooses rental dates → Pays deposit + rental fee via COD or Online → Receives confirmation → Returns outfit on due date (late fees if applicable).
3. **Booking Tickets:** User clicks **Book Tickets** → Selects ticket type and quantity → Pays via Online → Receives ticket with unique QR code → Shows QR at event entry → Gate Keeper scans and validates.
4. **Admin Operations:** Super Admin manages products, rentals, and events; Event Manager handles event-related tasks; Gate Keeper only scans tickets at the gate.

Third-Party Services & Purchases Required by Client

The following services are **to be purchased and provided by the client** for project implementation:

1. **SMS Service** — For sending ticket confirmations, order updates, and notifications.
 2. **Payment Gateway (Razorpay)** — For secure online transactions.
 3. **Bluedart APIs (if needed)** — For shipment tracking and logistics integration.
 4. **Server Hosting** — For running the application backend and database.
 5. **Domain Name** — For the website address.
 6. **QR Code Generation Service** (if not available free) — For generating unique QR codes attached to tickets.
-

Next Steps

1. Review and confirm the scope and features in this proposal.
2. Provide any additional functional constraints (e.g., preferred payment gateway, whether COD is allowed for tickets for your event, SMS provider).
3. After confirmation, detailed DB schema, API specification (Swagger/ Postman Documentation)
